Chapter 17-1: The Fossil Record Flashcards | Quizlet

Fossil record, history of life as documented by fossils, the remains or imprints of organisms from earlier geological periods preserved in sedimentary rock. It is used to describe the evolution of groups of organisms and the environment in which they lived and to discover the age of the rock in which they are found.

ROBERT W. PURDY, in Great White Sharks, 1996. Summary. The fossil record of the genus Carcharodon cannot be accurately interpreted on the basis of fossils alone. Only in light of the ecology of extant species does the fossil evidence achieve new significance and explain the distribution and faunal association of the fossil species. On the basis of the feeding and behavioral patterns of the ...

The fossil record is our best clue to the history of life on Earth, and an important indicator of past climates and geological conditions as well. The fossil record also plays a key role in our lives. Fossil fuels such as coal, gas, and oil formed from the decayed remains of plants and animals that lived millions of years ago.
