1.1 Continuous and Discrete Signals and Systems  
A continuous signal is a mathematical function of an independent variable  $t$ , where  $t$  represents a set of real numbers. It is required that signals are uniquely defined in  $t$  except for a finite number of points. For example, the function does not qualify for a signal even for  $t = \sqrt{x}$  since the square root

Discrete-time signals and systems See Oppenheim and Schaffer, Second Edition pages 8–93, or First Edition pages 8–79.  
1 Discrete-time signals  
A discrete-time signal is represented as a sequence of numbers:  $x[n]$ ,  $-\infty < n < \infty$ . Here  $n$  is an integer, and  $x[n]$  is the  $n$ th sample in the sequence.
